

ID NO. NC158015

## **System Pressure Advisory!**

The water customers of the Town of Marshall located from 5247 US 25/70 and south to and including the NC Hwy 213 corridor will be affected by a water outage. Customers affected include those along US 25/70 South along the route, the 213-corridor served by the Town of Marshall, Medical Park Drive, Smith Hollow Road, South Main Street from Hayes Run intersection south, and the Rollins Community. Customers in these areas will experience outages, no pressure, and low pressure in the distribution system due to a water main break.

Periods of low or no pressure in the distribution system increase the potential for back siphonage and introduction of bacteria into the water system.

Therefore, when water service is restored, consumers are advised to boil all water used for human consumption (including drinking, making ice, brushing teeth, washing dishes and food preparation) or use bottled water.

Vigorous boiling for one (1) minute should kill any disease-causing organisms that may be present in the water.

Water customers are strongly urged to conserve water whenever possible.

This advisory will remain in effect until further written notification is issued. Boiling water concentrates any levels of nitrates that may be present in the water. Infants below the age of six months and pregnant women should use an alternate water supply (e.g., bottled water) whenever possible.

This advisory issued on March 2, 2026, by:

Ryan Cody  
Town of Marshall
